

WEBVTT

1

00:00:00.000 --> 00:00:01.250

Dr. Constanza Sanhueza: to recall, like...

2

00:00:02.060 --> 00:00:02.610

MaxGroemping: Okay.

3

00:00:02.810 --> 00:00:11.969

Dr. Constanza Sanhueza: Okay So, I think the framework of resilience that was proposed by Seraphine and Vanessa and colleagues.

4

00:00:12.280 --> 00:00:14.100

Dr. Constanza Sanhueza: Is an output.

5

00:00:14.240 --> 00:00:18.389

Dr. Constanza Sanhueza: Focus Resilience, in which a measurement is...

6

00:00:18.980 --> 00:00:30.869

Dr. Constanza Sanhueza: On... is the democracy still surviving, you know, and what are the oscillations that this is having? Is it within a framework and it's able to recover, or is it kind of going into autocratization?

7

00:00:31.360 --> 00:00:37.070

Dr. Constanza Sanhueza: What I think is missing, and it's hard to connect it now to Eastern, is the process of that.

8

00:00:37.390 --> 00:00:45.119

Dr. Constanza Sanhueza: What is it that makes it resilient with the onset resilience and the kind of, what was it, the outbreak?

9

00:00:45.350 --> 00:00:45.990

Seraphine Maerz: the breakdown.

10

00:00:45.990 --> 00:00:46.450

MaxGroemping: McDonald.

11

00:00:46.450 --> 00:01:04.680

Dr. Constanza Sanhueza: to break down resilience, right? And I think what we are trying to connect is this output perspective of, you know, vision on the regime resilience to the process of the... that the regime requires in order to have that resilience. And I think

that's where we're coming in.

12

00:01:04.739 --> 00:01:11.500

Dr. Constanza Sanhueza: And in order to look at this process, the process of the resilience, We need to identify what

13

00:01:12.080 --> 00:01:16.460

Dr. Constanza Sanhueza: Pillars, or structures, or, you know, areas are.

14

00:01:17.330 --> 00:01:18.380

Dr. Constanza Sanhueza: And...

15

00:01:18.990 --> 00:01:30.980

Dr. Constanza Sanhueza: As a kind of political theory, or as a political... as a theoretical framework, but then push it further to see in what parts artificial intelligence is challenging it, and where it can be a tool.

16

00:01:33.700 --> 00:01:35.469

Dr. Constanza Sanhueza: That's my thought there.

17

00:01:36.680 --> 00:01:38.820

MaxGroemping: I, I agree,

18

00:01:39.210 --> 00:01:47.209

MaxGroemping: I think we might want to add a third, by the way, component as well, so absorbing or withstanding shocks, enabling

19

00:01:47.340 --> 00:01:52.589

MaxGroemping: The responsive feedback loop, and, something about...

20

00:01:54.060 --> 00:01:59.290

MaxGroemping: Self-improvement, like, re... renewing the system,

21

00:01:59.470 --> 00:02:08.699

MaxGroemping: Which is pointed out in some of the resilience writings, so it doesn't only have to rebound back to status quo, but to kind of get... get essentially better.

22

00:02:08.860 --> 00:02:15.550

MaxGroemping: Over time, that is the third component. And so I think if we could identify at the...

23

00:02:16.310 --> 00:02:25.889

MaxGroemping: At the input... Process, throughput, and output sign. Some properties that enable those three functions.

24

00:02:26.330 --> 00:02:30.390

MaxGroemping: Then... then we can kind of

25

00:02:30.560 --> 00:02:43.220

MaxGroemping: put AI over it and say, well, does... does AI help enable this, or does it undermine it? And it probably does both. So let me give you an example. If, if you talk about the...

26

00:02:44.130 --> 00:02:47.339

MaxGroemping: demand input side.

27

00:02:47.680 --> 00:02:51.839

MaxGroemping: then... You would... it's... you would basically,

28

00:02:52.040 --> 00:02:54.510

MaxGroemping: Or you could propose something like,

29

00:02:58.620 --> 00:03:12.579

MaxGroemping: around, like, a lack of extremity, basically. Like, moderation. So not... not extreme demands. Extreme demands and extreme, attitudes, on the input side would...

30

00:03:13.200 --> 00:03:16.040

MaxGroemping: Undermine the system's ability

31

00:03:16.510 --> 00:03:27.579

MaxGroemping: to have responsive feedback, and also to renew. So, it's kind of abstract, but that's what I'm thinking, like, on each level, like, specify the properties.

32

00:03:29.430 --> 00:03:33.030

Dr. Constanza Sanhueza: Sorry, Max, but can I add something to that idea?

33

00:03:33.330 --> 00:03:42.460

Dr. Constanza Sanhueza: I agree, like, if the demands are too extreme, it's very hard for the system to respond. But it's not only if the demand is too extreme, it's if the demand is very polarized.

34

00:03:42.690 --> 00:03:47.270

MaxGroemping: Yes, that's... I would include that, yes, yes, absolutely.

35

00:03:47.270 --> 00:03:48.069

Dr. Constanza Sanhueza: The link was moving.

36

00:03:48.070 --> 00:04:01.310

Seraphine Maerz: linked to what I wanted to add, because I think, like, in the paper I'm working on right now, for me, resilience is also that there are actually challengers in the system.

37

00:04:01.400 --> 00:04:11.499

Seraphine Maerz: And this is not just absorbing shocks, but it's also, like, the resilience test can only be done if

38

00:04:11.600 --> 00:04:24.059

Seraphine Maerz: there is polarization, there is, division, and so on. So these challenges need to be already there, and not all democracies have that in the same extent.

39

00:04:25.190 --> 00:04:25.790

MaxGroemping: Yep.

40

00:04:25.790 --> 00:04:28.480

Dr. Constanza Sanhueza: Right, so as a kind of an opportunity.

41

00:04:28.850 --> 00:04:47.529

Dr. Constanza Sanhueza: Yeah, so... so... so I... so go back, sorry, trying to theorize this. So, in the input, we have... so we have the demands, and from the demands, there are features of that demand, and it... it might not be possible to be resilient if it is too extreme or polarized, too divisive.

42

00:04:48.340 --> 00:04:55.919

Dr. Constanza Sanhueza: And then there is another part of the input part, which is kind of the problem load or extreme, external shock.

43

00:04:56.300 --> 00:05:03.010

Dr. Constanza Sanhueza: Right? People might not realize that this is a need, but the system needs to react, right? So we have two parts.

44

00:05:03.310 --> 00:05:05.459

Dr. Constanza Sanhueza: I think...

45

00:05:05.670 --> 00:05:14.469

Dr. Constanza Sanhueza: Max, you highlighted an interesting point, because we are looking at that system, how that system is responding in the Eastern terms, potentially, but that...

46

00:05:14.790 --> 00:05:17.230

Dr. Constanza Sanhueza: We can measure that in...

47

00:05:17.230 --> 00:05:34.879

Dr. Constanza Sanhueza: in terms of that... is that process resulting in democracy or non-democracy? Is that process resulting in less democracy, which is the distinction of Seraphine and et al. on the onset and the breakdown? But also, there is this third dimension you, Max, mentioned.

48

00:05:34.880 --> 00:05:37.609

Dr. Constanza Sanhueza: Is the result of that process?

49

00:05:37.720 --> 00:05:41.330

Dr. Constanza Sanhueza: An improvement, which is category, right? The...

50

00:05:42.750 --> 00:05:52.560

Dr. Constanza Sanhueza: I don't know how to call it, the lifting of the democracy, the... Overcoming the, yeah, improvement, right?

51

00:05:53.420 --> 00:06:04.330

MaxGroemping: I think that... I think Croissant and Lott have this three-fold, differentiation. Or the Merkel 2026 does as well.

52

00:06:04.510 --> 00:06:14.670

MaxGroemping: It's like... Withstand, adjust, recover. It's not exactly the.

53

00:06:14.670 --> 00:06:15.330

Dr. Constanza Sanhueza: No.

54

00:06:15.330 --> 00:06:15.970

MaxGroemping: No.

55

00:06:16.170 --> 00:06:22.759

Dr. Constanza Sanhueza: It's a more optimistic one. It's the one where you kind of... Improves, renews, improves, yeah.

56

00:06:23.200 --> 00:06:35.700

MaxGroemping: Yeah, and that brings the democratic innovations, and the liberation and things in much more clearly, because it's about... it is squarely on the improvement aspect.

57

00:06:36.840 --> 00:06:53.440

Dr. Constanza Sanhueza: So, if we bring it back to historical examples, a little bit far from AI, because the system has to work beyond that, let's say, you know, a process by which demands of inclusion of women or minorities or immigrants has resulted in a positive outcome.

58

00:06:53.440 --> 00:07:02.190

Dr. Constanza Sanhueza: the democracy didn't go to the level it had, it improved, basically, because it was able to include parts of the population that were previously

59

00:07:03.120 --> 00:07:08.949

Dr. Constanza Sanhueza: excluded, and now they are consulted and integrated, right? So that would be kind of a very clear.

60

00:07:09.980 --> 00:07:18.999

Dr. Constanza Sanhueza: example, so what... I need... required also democratic innovation, right, and institutional change.

61

00:07:23.100 --> 00:07:26.689

MaxGroemping: What is in the, in the, in the middle part?

62

00:07:27.210 --> 00:07:34.740

MaxGroemping: throughput. So, if I look at, sort of, kind of... minimalistic...

63

00:07:38.300 --> 00:07:39.760

MaxGroemping: Model of this.

64

00:07:40.860 --> 00:07:42.599

MaxGroemping: I don't know if you can see this.

65

00:07:43.070 --> 00:07:47.839

MaxGroemping: So... Yes. Can you see this? Okay, so input side, output

side.

66

00:07:48.050 --> 00:07:48.530

Dr. Constanza Sanhueza: Yeah.

67

00:07:48.530 --> 00:07:51.919

MaxGroemping: Throughput could be really a lot.

68

00:07:52.040 --> 00:07:52.680

MaxGroemping: Here.

69

00:07:52.680 --> 00:07:53.160

Dr. Constanza Sanhueza: Yep.

70

00:07:53.160 --> 00:07:57.830

MaxGroemping: It's all the things that turn

71

00:07:59.210 --> 00:08:10.930

MaxGroemping: So it's all the things that in the political system have been designed to turn the inputs into outputs, obviously. So that includes the elections, that includes, interest groups, it includes,

72

00:08:12.440 --> 00:08:19.130

MaxGroemping: I don't know, violent confrontation, it's a lot, and if we want to incorporate it.

73

00:08:19.290 --> 00:08:21.759

MaxGroemping: I think we need to...

74

00:08:21.950 --> 00:08:31.330

MaxGroemping: So maybe that's where institutions are. In many of the resilience articles I read, institutions are a separate dimension, in a way.

75

00:08:33.130 --> 00:08:43.480

MaxGroemping: And maybe this is where they're situated. We don't have to put institutions as a pillar, or whatever we want to call it, but maybe they are there in the middle in this throughput side.

76

00:08:46.300 --> 00:08:50.549

Seraphine Maerz: Yeah, and, I think I would illustrate this throughput,

77

00:08:51.370 --> 00:09:00.679

Seraphine Maerz: Maybe also with two directions, so it can either go in favor of democratic resilience or against.

78

00:09:01.520 --> 00:09:09.760

Seraphine Maerz: So, whatever it is, what you just mentioned, elections, and also what we already list in those pillars that can go both ways.

79

00:09:10.050 --> 00:09:10.870

MaxGroemping: Yep.

80

00:09:10.870 --> 00:09:22.069

Seraphine Maerz: And maybe this is also how we can illustrate this, flexibility, this, adaptiveness, of, of the throughput, right? Like...

81

00:09:22.460 --> 00:09:31.750

Seraphine Maerz: input and demand and everything, this is also, clearly very important, but then, as you said, Constanza, the process...

82

00:09:32.570 --> 00:09:41.360

Seraphine Maerz: Decides in which direction it goes, whether it is really supporting democratic resilience or against.

83

00:09:41.870 --> 00:09:46.209

Seraphine Maerz: And I think then later, the question with AI is,

84

00:09:46.720 --> 00:10:05.880

Seraphine Maerz: Like, with digital authoritarianism, not so much the question what it changes, but rather, the argument that it accelerates everything, that it makes everything faster, and that, this, this war about information, like this, what we call informationalism.

85

00:10:05.920 --> 00:10:13.330

Seraphine Maerz: is just more important. So, I also agree, like, for now, we should maybe even leave AI out of this.

86

00:10:13.480 --> 00:10:25.619

Seraphine Maerz: And later on, just illustrated that the spiral, like, I see it, like, kind of like a spiral, in either one or the other way, and AI just accelerates the spiral.

87

00:10:25.620 --> 00:10:26.300

Dr. Constanza Sanhueza: Yep.

88

00:10:26.980 --> 00:10:27.720

Dr. Constanza Sanhueza: Yeah.

89

00:10:27.720 --> 00:10:33.190

Seraphine Maerz: And, I drafted, like, like a hexa crumb.

90

00:10:34.410 --> 00:10:34.980

Seraphine Maerz: Awesome.

91

00:10:34.980 --> 00:10:36.219

MaxGroemping: It's a hexagram.

92

00:10:36.580 --> 00:10:39.509

Dr. Constanza Sanhueza: And that would be the throughput? Is that the.

93

00:10:39.510 --> 00:10:40.930

Seraphine Maerz: You can't see it, right?

94

00:10:41.420 --> 00:10:43.269

Dr. Constanza Sanhueza: Is that the throughput?

95

00:10:44.450 --> 00:10:46.150

Dr. Constanza Sanhueza: I do. Yes, I see.

96

00:10:46.150 --> 00:10:47.170

MaxGroemping: Yeah, yeah, yeah.

97

00:10:47.610 --> 00:10:48.180

MaxGroemping: Like...

98

00:10:48.180 --> 00:10:49.250

Dr. Constanza Sanhueza: Is that the throughput?

99

00:10:49.250 --> 00:11:02.350

Seraphine Maerz: Yeah, yeah, because it's more flexible than pillars, and we can then illustrate... I mean, it's also the question,

what is the overall goal? Like, do we have a measurement goal? Do we have, like, some kind of,

100

00:11:02.360 --> 00:11:12.279

Seraphine Maerz: assessment goal, but if we have that, then I think this hexagram, or what, like, however... how many components,

101

00:11:12.490 --> 00:11:20.939

Seraphine Maerz: We have, but it's more flexible than the pillars, because we can then make this kind of graphical illustration out of it.

102

00:11:20.940 --> 00:11:32.499

Dr. Constanza Sanhueza: That's a good point. And I have figure 2 of Grachevsky 2013 I sent you, goes in that direction. I think it could have... this is a triangle, because it has these pillars that form a triangle, but...

103

00:11:33.430 --> 00:11:35.100

Seraphine Maerz: I can't see that.

104

00:11:35.430 --> 00:11:37.270

Dr. Constanza Sanhueza: In Figure 2.

105

00:11:37.270 --> 00:11:40.480

Seraphine Maerz: No, I can't, I, you, you, you shared.

106

00:11:40.480 --> 00:11:40.840

Dr. Constanza Sanhueza: Oh, God.

107

00:11:40.840 --> 00:11:42.260

Seraphine Maerz: but I can't access it.

108

00:11:42.260 --> 00:11:47.279

Dr. Constanza Sanhueza: Okay, so can I share my screen? Share screen here?

109

00:11:49.500 --> 00:11:51.340

Dr. Constanza Sanhueza: This one.

110

00:11:52.310 --> 00:11:54.530

Dr. Constanza Sanhueza: So, in Figure 2, what is.

111

00:11:54.530 --> 00:11:59.589

Seraphine Maerz: Yeah, yeah, yeah, and I know that, yeah, and I made a hexagram out of this in my publication.

112

00:11:59.590 --> 00:12:02.430

Dr. Constanza Sanhueza: Yeah, exactly. So, what is Figure?

113

00:12:04.430 --> 00:12:22.049

Dr. Constanza Sanhueza: So in figure 2, what... what is interesting is this reciprocal reinforcement and complementarity. So... so if you have a hexagon, or how, you know, pentagon, whatever number, what it also can illustrate is their movement, but also how

114

00:12:22.130 --> 00:12:26.709

Dr. Constanza Sanhueza: They might reinforce each other, or, you know, pull in different directions.

115

00:12:28.750 --> 00:12:35.849

Seraphine Maerz: Yeah, yeah, yeah, I mean, I, I think the, the,

116

00:12:35.960 --> 00:12:39.130

Seraphine Maerz: Triangle is not helpful in our,

117

00:12:40.050 --> 00:12:43.240

Seraphine Maerz: Context, because we have more than 3 corners.

118

00:12:43.830 --> 00:12:57.810

Seraphine Maerz: But I, I like the process, like the, like the illustration of, what, what, how, how, yeah, the reciprocal relationships, the dynamic, that it's dynamic, yeah.

119

00:12:58.050 --> 00:13:07.140

Seraphine Maerz: So maybe, maybe this is, this leading somewhere. And then...

120

00:13:07.140 --> 00:13:08.110

MaxGroemping: Okay.

121

00:13:08.800 --> 00:13:21.429

Seraphine Maerz: Yeah, then if we have then AI coming in, it can be illustrated as, this spiral of, either bringing it into this one direction or into this other direction.

122

00:13:23.060 --> 00:13:32.669

MaxGroemping: Can we... can we step it out to the... to the end? Like, to the output side? Because I think this is really very fruitful, and I can...

123

00:13:32.780 --> 00:13:38.090

MaxGroemping: see impacts... I can see risks and opportunities in the input.

124

00:13:38.210 --> 00:13:42.100

MaxGroemping: And in the throughput in our hexagon, whatever.

125

00:13:42.310 --> 00:13:55.290

MaxGroemping: and the output, so the output is policy and regulation and extraction and things. And I wonder if that is actually where a lot of the governance

126

00:13:55.840 --> 00:14:00.699

MaxGroemping: an AI in the public service type of stuff comes in, so that

127

00:14:02.010 --> 00:14:11.820

MaxGroemping: we wanted to leave AI out of it, but... so that, basically, The outputs are... conducive to resilience.

128

00:14:13.100 --> 00:14:21.919

MaxGroemping: they are... Sort of, of high quality, if they are...

129

00:14:22.280 --> 00:14:26.680

MaxGroemping: Kind of commensurate with the demand?

130

00:14:28.010 --> 00:14:37.999

MaxGroemping: If they are effective, things like that. And if they are not, then that is probably not good for resilience. So that on each,

131

00:14:38.410 --> 00:14:53.279

MaxGroemping: stage of this process, input, throughput, output, we can specify what it is that will make the system more resilient. And I would say, yeah, timeliness, and commensurability... no, not that, but...

132

00:14:53.560 --> 00:15:02.249

MaxGroemping: responsiveness to the output, so... and then you can overlay AI on that. It can make it more responsive, less responsive, can make it more timely, less timely, and blah blah blah.

133

00:15:02.480 --> 00:15:03.090

Dr. Constanza Sanhueza: Hmm.

134

00:15:04.570 --> 00:15:07.509

Dr. Constanza Sanhueza: Can I add one comment on the output?

135

00:15:08.000 --> 00:15:12.979

Dr. Constanza Sanhueza: Because I think we have... Output with capital letters.

136

00:15:12.980 --> 00:15:13.880

MaxGroemping: East.

137

00:15:13.920 --> 00:15:26.559

Dr. Constanza Sanhueza: resilience in the three... as three as... being able to turn a democratic, you know, backsliding, correct itself, or improve. And there is output

138

00:15:26.770 --> 00:15:28.240

Dr. Constanza Sanhueza: In small letters.

139

00:15:28.340 --> 00:15:30.900

Dr. Constanza Sanhueza: Which is specific policies.

140

00:15:30.900 --> 00:15:31.660

MaxGroemping: Hmm.

141

00:15:31.660 --> 00:15:35.430

Dr. Constanza Sanhueza: Programs, right, that should be commensurate with.

142

00:15:35.430 --> 00:15:35.950

MaxGroemping: Mmm.

143

00:15:36.060 --> 00:15:42.899

Dr. Constanza Sanhueza: Because sometimes the demands are crazy bananas, I'm sorry. Not all the demands are great for democracy.

144

00:15:42.900 --> 00:15:43.630

MaxGroemping: Yes.

145

00:15:44.420 --> 00:15:45.170

MaxGroemping: Yeah.

146

00:15:45.720 --> 00:16:03.030

MaxGroemping: But that is that, then, a problem of input resilience? Like, it's getting dangerously close to a point where you're saying, you know, we need the right citizens, and if only everyone had the correct information, then, of course, the system would be resilient, because their demands are

147

00:16:03.650 --> 00:16:06.290

MaxGroemping: You know, correct, or whatever.

148

00:16:07.670 --> 00:16:23.070

MaxGroemping: And I think there is an aspect of that in, you know, Beth Novak's work in all of these cybernetics that treats this whole system very much as purely information, etc, and so it gets into, like, the...

149

00:16:23.080 --> 00:16:31.730

MaxGroemping: engineering. We can engineer our way out of the crisis, and I am a little bit critical of that as well, because there are just going to be

150

00:16:31.760 --> 00:16:36.379

MaxGroemping: Interests that don't match, and they will just be incompatible.

151

00:16:36.680 --> 00:16:51.499

Dr. Constanza Sanhueza: But it's okay that their interests don't match. Yes. And I think there is an oversimplification among, you know, science and technology studies, particularly that area, I agree, that they don't take into account all these complexities of democracy, yeah.

152

00:16:54.140 --> 00:17:00.629

Seraphine Maerz: I'm thinking, like, we said we leave AI out for now, but...

153

00:17:00.630 --> 00:17:01.100

MaxGroemping: Nevertheless.

154

00:17:01.100 --> 00:17:05.130

Seraphine Maerz: I keep checking for myself, is it that, like.

155

00:17:05.750 --> 00:17:21.340

Seraphine Maerz: is it really, as we described, that AI just accelerates everything, or does it bring in something new? Because if we would be able to, break that down to, something which, for example, we could not claim for the internet.

156

00:17:21.339 --> 00:17:36.420

Seraphine Maerz: or for any other technological or communication kind of revolution before, then this would be also something we would need to clearly illustrate in this framework, and I'm just thinking along those lines.

157

00:17:36.420 --> 00:17:45.150

Seraphine Maerz: So I was thinking, what is AI? And, here we, I think we also need to be very clear what, what we think, like, what we cover,

158

00:17:45.290 --> 00:17:47.650

Seraphine Maerz: Here, or what we would...

159

00:17:47.960 --> 00:17:57.590

Seraphine Maerz: want to cover, because the question is also, and these discussions are, right now, very timely,

160

00:17:57.770 --> 00:18:09.409

Seraphine Maerz: Do we just assume that AI is being abused, for example, to harm democracy, to hinder democratic resilience, or do we,

161

00:18:09.630 --> 00:18:14.349

Seraphine Maerz: also account for AI, having an agency.

162

00:18:14.470 --> 00:18:30.360

Seraphine Maerz: And I think these are two different things, and I think it's timely to also cover, like, so far in our works, right, we kind of didn't really cover that yet, because it's also very difficult to cover, because there's very little empirical data out there yet.

163

00:18:30.430 --> 00:18:37.659

Seraphine Maerz: But I think we, at least theoretically, have to

account, and by this I don't mean that,

164

00:18:38.180 --> 00:18:39.590

Seraphine Maerz: You know, the...

165

00:18:39.770 --> 00:18:52.530

Seraphine Maerz: humanity is wiped out in the next two years or so, like... but maybe there is something to it to also account for AI agency, when we,

166

00:18:52.950 --> 00:19:01.510

Seraphine Maerz: think, about these processes, because AI, if we include AI as,

167

00:19:02.500 --> 00:19:08.830

Seraphine Maerz: a benefit for the process, then we also give AI agency in the process.

168

00:19:09.050 --> 00:19:19.140

Seraphine Maerz: And then it's the question... About the output of... AI as an agency.

169

00:19:20.370 --> 00:19:32.040

Seraphine Maerz: So maybe we should also think, like, what kind of AI do we want to cover here? Is it also AI agency, or is it only AI abuse and AI use?

170

00:19:32.320 --> 00:19:37.359

Seraphine Maerz: And AI demands and the need to regulate AI.

171

00:19:39.300 --> 00:19:48.209

MaxGroemping: I have a view on that, and it distinguishes it very clearly from internet and then social media, and that's the capability to act.

172

00:19:49.100 --> 00:19:55.409

MaxGroemping: And we don't have to get into the philosophy of whether AI agents

173

00:19:55.640 --> 00:20:04.669

MaxGroemping: You know, can set their goals independently or whatever, but the matter of fact is that they have the ability to act on something, and that is completely different from these

174

00:20:05.000 --> 00:20:22.850

MaxGroemping: past technologies, and here I found this article, that I pasted, I don't know if you can access it, quite, quite useful, because it steps out a kind of taxonomy of different AI capabilities.

175

00:20:23.200 --> 00:20:29.100

MaxGroemping: And it has the four, and this... this fourth one, ACT, is just... Completely new.

176

00:20:29.280 --> 00:20:31.069

MaxGroemping: So my...

177

00:20:32.860 --> 00:20:48.210

MaxGroemping: Like, my initial... my intuition is to include agency, definitely, and potentially, just overlay these four capabilities on our pillars, or on our input, throughput, output, and to just

178

00:20:48.220 --> 00:20:53.850

MaxGroemping: Not to make it too complicated, but to help us think on what the effect of each of these capabilities

179

00:20:54.060 --> 00:21:10.819

MaxGroemping: is at this stage. Because sensing, for example, is yet another thing that is related to all three stages. It's also related to the surveillance kind of control aspect of your informationalism, Seraphine.

180

00:21:11.210 --> 00:21:15.480

MaxGroemping: And I think a lot of focus in

181

00:21:15.690 --> 00:21:30.379

MaxGroemping: kind of political science definitely is just on communicate, and then in public policy, it's on process, like getting information and communicating it much more efficiently. But sensing and acting is often left out.

182

00:21:31.290 --> 00:21:33.310

Seraphine Maerz: What is meant with sensing?

183

00:21:34.300 --> 00:21:35.050

MaxGroemping: It's...

184

00:21:35.180 --> 00:21:46.909

MaxGroemping: They have one for each. So it's, classification of images, of videos, large data ingestion, and,

185

00:21:47.630 --> 00:21:56.109

MaxGroemping: Even, kind of, ability to, I don't know, remote sense, look at satellite images, things like that.

186

00:21:58.080 --> 00:21:59.090

Seraphine Maerz: Interesting.

187

00:21:59.900 --> 00:22:04.629

Seraphine Maerz: But I like that, I like that, yeah, and I agree, like, this, this,

188

00:22:04.890 --> 00:22:09.019

Seraphine Maerz: This, can be nicely connected.

189

00:22:12.160 --> 00:22:12.840

Seraphine Maerz: So...

190

00:22:12.840 --> 00:22:24.189

Dr. Constanza Sanhueza: I'm not making things complicated. I have an issue with using the word acting, for example, for the technology, because to me, it's inherently human.

191

00:22:24.450 --> 00:22:34.579

Dr. Constanza Sanhueza: And... and the fact is... so then I go, well... but there is still a performance, there is still the ability to impact without human control.

192

00:22:34.920 --> 00:22:38.670

Dr. Constanza Sanhueza: But who is generating that opportunity to impact?

193

00:22:38.900 --> 00:22:57.229

Dr. Constanza Sanhueza: without humans. So then it goes back to lack of regulation, lack of framework. We are creating a monster without fully understanding what we are creating. So, it's like, yes, these systems might be able to act or have an impact on other systems, but

194

00:22:57.280 --> 00:22:59.160

Dr. Constanza Sanhueza: Someone is producing this.

195

00:22:59.230 --> 00:23:03.550

Dr. Constanza Sanhueza: There are companies producing this, and there are governments that are not regulating.

196

00:23:07.480 --> 00:23:09.759

MaxGroemping: Yeah, philosophically, I agree.

197

00:23:10.010 --> 00:23:25.539

MaxGroemping: But whether or not an AI or another machine can act out of its own volition, or it can act because it has been programmed to do so, are observationally equivalent. So I think it's hard to distinguish the two.

198

00:23:25.540 --> 00:23:37.300

MaxGroemping: And a lot of the agenda-setting articles in Science and Nature, you know, a lot of them, even in recent months, they basically have made that leap and said.

199

00:23:37.350 --> 00:23:38.860

MaxGroemping: It doesn't matter.

200

00:23:40.040 --> 00:23:43.120

MaxGroemping: If the agents can really act.

201

00:23:43.260 --> 00:23:48.600

MaxGroemping: Or, you know, just act as if they act, or whatever you might want to call it. It is a threat.

202

00:23:49.240 --> 00:24:00.219

MaxGroemping: So, maybe we find a better... a better wording, like, impacting, or I... I... that could be good, but I think we... we need to account for this new ability.

203

00:24:00.760 --> 00:24:10.580

Seraphine Maerz: Okay, so let me summarize, because before, we kind of, said that we leave AI out, because it only,

204

00:24:11.580 --> 00:24:23.960

Seraphine Maerz: includes an additional layer to whatever democratic resilience is, also before AI. But now, we actually agree that there is a change, and I think we need to give it a name.

205

00:24:23.960 --> 00:24:32.560

Seraphine Maerz: like, AI brings in something new, and I think this would help us to also claim, some kind of unique,

206

00:24:32.580 --> 00:24:40.980

Seraphine Maerz: thing we want to contribute here when thinking about democratic resilience. So, can we try to name this?

207

00:24:41.360 --> 00:24:43.910

Seraphine Maerz: democratic resilience before AI?

208

00:24:44.610 --> 00:25:02.289

Seraphine Maerz: and after AI, and we agree that it's a flexible, fluid concept, and so on, but what, like, can we name it? What is it what AI changes? Like, if we now say it acts independent of whether it's because it's not controlled, or because...

209

00:25:02.290 --> 00:25:08.029

Seraphine Maerz: It wants to act, or whatever. But then this... what does this change, if you think about...

210

00:25:08.390 --> 00:25:12.530

Seraphine Maerz: In comparison, the internet or everything what we had before.

211

00:25:13.530 --> 00:25:18.170

Seraphine Maerz: Like, in, in the... maybe also in this throughput, thing.

212

00:25:18.630 --> 00:25:21.860

Seraphine Maerz: What does this change? How would we call that?

213

00:25:24.430 --> 00:25:30.500

MaxGroemping: And before, you suggested, oh, we know it's something around, like, speed.

214

00:25:30.830 --> 00:25:34.850

MaxGroemping: Of information flows and things like that, but it... Okay.

215

00:25:35.620 --> 00:25:43.540

MaxGroemping: So we're looking... we're looking for a broader... a broader, umbrella of... of which the speed is an instance of.

216

00:25:43.710 --> 00:25:59.039

Seraphine Maerz: Yeah, and it's not just speed, right? Because the internet also speeded up everything, and, like, we have more communication to deal with, we have big data with the internet, so I think all these changes are not...

217

00:25:59.420 --> 00:26:11.070

Seraphine Maerz: substantially new compared to the revolution of the internet. But what is what... like, apart from that, what else does AI bring?

218

00:26:11.370 --> 00:26:13.140

Seraphine Maerz: Which is relevant here.

219

00:26:14.540 --> 00:26:25.270

MaxGroemping: So, this... the article in Nature Human Behavior, the Impact of Advanced AI System on Democracy, puts a lot of emphasis on language.

220

00:26:25.680 --> 00:26:34.630

MaxGroemping: And the importance that language plays in organizing our inputs and throughputs, And...

221

00:26:35.620 --> 00:26:41.369

MaxGroemping: The fact that large language models Half... The ability to converse.

222

00:26:41.520 --> 00:26:48.299

MaxGroemping: in... in a way that humans intuitively understand. Like, that is...

223

00:26:48.580 --> 00:26:55.710

MaxGroemping: This step changing, because it means it can... Make

224

00:26:56.540 --> 00:27:09.390

MaxGroemping: the institutions of throughput legible, like the laws and systems designed that are very complicated, and whole professions have developed around it, it can make it legible to everyone.

225

00:27:09.650 --> 00:27:12.559

MaxGroemping: So that would be the positive spin on it.

226

00:27:14.000 --> 00:27:20.620

MaxGroemping: So it's... it's speed, but it's... it's kind of...

227

00:27:21.440 --> 00:27:25.080

MaxGroemping: Is it the mode of communication?

228

00:27:26.480 --> 00:27:29.360

MaxGroemping: I think I'm going off in the wrong direction here.

229

00:27:29.360 --> 00:27:35.350

Dr. Constanza Sanhueza: I see the Industrial Revolution, for example, as a big change in the... it's a revolution in the production.

230

00:27:35.480 --> 00:27:43.870

Dr. Constanza Sanhueza: AI is the revolution of the processing of information, not necessarily of communication, I think internet did a lot of that already.

231

00:27:44.580 --> 00:27:51.050

Dr. Constanza Sanhueza: But the processing of information. So now you can process, you know, a lot of data,

232

00:27:51.240 --> 00:27:56.069

Dr. Constanza Sanhueza: You can ask questions and get a summary that might be incorrect, right?

233

00:27:56.290 --> 00:27:58.380

Dr. Constanza Sanhueza: But it's processing information.

234

00:28:01.020 --> 00:28:19.869

Seraphine Maerz: Yes. So, maybe, maybe this, is also too off, but let me spell it out anyway. Like, with this book I'm writing now with Ken, we are also trying to, think along those lines, like, what is now different with content analysis, bringing in LLMs?

235

00:28:19.870 --> 00:28:25.950

Seraphine Maerz: And, maybe, we can make a similar argument, because what is different is...

236

00:28:25.960 --> 00:28:30.140

Seraphine Maerz: Although we don't yet have,

237

00:28:30.510 --> 00:28:48.310

Seraphine Maerz: AI in this general sense, like, what is it called? Artificial, general intelligence, right? Where we, assume that, it's not just limited to, specific tasks, but can really control, many different complex tasks at once.

238

00:28:48.340 --> 00:28:57.620

Seraphine Maerz: I think, what we already see is that, It's... Connects more tasks than

239

00:28:57.720 --> 00:29:05.400

Seraphine Maerz: what any tool did before, or what any... like, the internet, for example, was just limited to one specific...

240

00:29:06.030 --> 00:29:09.400

Seraphine Maerz: area. It couldn't connect the dots.

241

00:29:09.560 --> 00:29:17.730

Seraphine Maerz: and AI connects the dots, so in this process, I think the difference could be that,

242

00:29:18.540 --> 00:29:23.600

Seraphine Maerz: And this goes into both directions of the spiral. It can...

243

00:29:24.330 --> 00:29:32.289

Seraphine Maerz: It has a decisive role in not just one area, but in several areas at once.

244

00:29:32.490 --> 00:29:35.729

Seraphine Maerz: Like, with the content analysis, it now...

245

00:29:35.730 --> 00:29:54.099

Seraphine Maerz: does not just as the software before, do the ordering of classifications, but it also thinks about the classifications and assigns labels and everything. So, like, this... how can we describe this? I think this is also important.

246

00:29:54.100 --> 00:29:57.139

Seraphine Maerz: About, democratic...

247

00:29:57.780 --> 00:30:13.190

Seraphine Maerz: processes, you know what I mean? Like, this interconnectedness, this... it's more powerful, it's not just speed or big data, it's, like, language. I think these points are also really

important, but can we summarize this

248

00:30:13.640 --> 00:30:24.159

Seraphine Maerz: With this, capacity to... To do all our, like, several things at once.

249

00:30:24.160 --> 00:30:27.920

MaxGroemping: Synthesis, of...

250

00:30:32.970 --> 00:30:46.189

MaxGroemping: Lance Bennett called it one affordance of Twitter to stitch together different information networks, so the network of networks, somehow, and I think

251

00:30:46.390 --> 00:30:48.760

MaxGroemping: We're trying to get at something similar.

252

00:30:49.010 --> 00:31:00.820

MaxGroemping: That it stitches together different... previously disconnected it. I don't know,

253

00:31:01.530 --> 00:31:05.959

MaxGroemping: Pieces of information or arenas of action

254

00:31:10.720 --> 00:31:15.669

MaxGroemping: But stitching together is not a... it's not a...

255

00:31:15.670 --> 00:31:24.859

Seraphine Maerz: But it's the same image, right? Like, it's so powerful because it is not just limited to one domain.

256

00:31:31.020 --> 00:31:31.670

MaxGroemping: Yeah.

257

00:31:34.830 --> 00:31:37.400

Seraphine Maerz: Spanning... Across...

258

00:31:43.820 --> 00:31:52.010

MaxGroemping: So, but what domain... so what domains, what areas are we... are we thinking here that are now connected, that are bridged?

259

00:31:52.170 --> 00:31:58.150

MaxGroemping: And that's what makes it... So, so, revolutionary.

260

00:32:06.000 --> 00:32:09.209

Seraphine Maerz: So, let's think about examples. I think that's good.

261

00:32:10.040 --> 00:32:12.600

Seraphine Maerz: So, if you think about elections.

262

00:32:14.360 --> 00:32:20.950

Seraphine Maerz: And then, the negative impact AI can have here, like, the acceleration...

263

00:32:21.510 --> 00:32:27.060

Seraphine Maerz: The negative spiral leading to democratic Decline.

264

00:32:28.820 --> 00:32:31.569

Seraphine Maerz: That would be... that,

265

00:32:36.320 --> 00:32:43.709

Seraphine Maerz: Yeah, but it's, I mean, no, it's... they're not connected, right? It's different actors using AI to do diff... different things.

266

00:32:59.400 --> 00:33:06.150

Seraphine Maerz: Yeah, maybe this, this argument that it's, it's more connect, like, that's, like an orchestrated...

267

00:33:06.400 --> 00:33:07.080

MaxGroemping: Hmm?

268

00:33:07.120 --> 00:33:08.069

Seraphine Maerz: But it's difficult.

269

00:33:08.070 --> 00:33:08.530

MaxGroemping: You go to...

270

00:33:08.530 --> 00:33:14.490

Seraphine Maerz: make, it's difficult to make, because we don't really see that empirically, and so I think we have to, to,

271

00:33:14.790 --> 00:33:16.489

Seraphine Maerz: Explore something else.

272

00:33:18.720 --> 00:33:21.440

MaxGroemping: It's integrating, it's integrative.

273

00:33:21.590 --> 00:33:25.040

MaxGroemping: Of... of different aspects. It... it is...

274

00:33:25.460 --> 00:33:35.539

MaxGroemping: It immediately bridges across, and therefore its effects are simultaneously, on different areas. Yeah.

275

00:33:35.660 --> 00:33:41.649

MaxGroemping: And maybe we don't need the vocabulary just yet for that, and maybe it will come to us.

276

00:33:47.460 --> 00:33:54.250

Dr. Constanza Sanhueza: I think I like this idea of integration that also relates to this idea of networks.

277

00:33:54.550 --> 00:33:57.939

Dr. Constanza Sanhueza: what I think is also important is that it's processing

278

00:33:58.240 --> 00:34:02.029

Dr. Constanza Sanhueza: A great amount of information that is beyond human capacity.

279

00:34:02.400 --> 00:34:18.160

Dr. Constanza Sanhueza: And so, basically, you're having these other things that can process a lot of information for you, and then give you something that you can read and understand, but you don't know what went into it. And it sounds, like, correct, but it might not be, right?

280

00:34:18.900 --> 00:34:26.310

Dr. Constanza Sanhueza: And so that can be for the, you know, the normal citizen, but could also be for a public employee, right, in assessing cases.

281

00:34:26.679 --> 00:34:28.239

Dr. Constanza Sanhueza: And all of that, so...

282

00:34:28.560 --> 00:34:34.329

Seraphine Maerz: Yeah, I think that's a good point. As you just said it, I wrote down shifting realities.

283

00:34:34.500 --> 00:34:37.830

Seraphine Maerz: Like, maybe we, we need to go to, to,

284

00:34:38.400 --> 00:34:46.170

Seraphine Maerz: like, how would that look like in examples? Like, this... like, what does it do with what we perceive of...

285

00:34:46.929 --> 00:34:53.340

Seraphine Maerz: What's happening, of the truth, of what democratic resilience

286

00:34:53.940 --> 00:34:58.270

Seraphine Maerz: Is an... of democracy, more generally, and...

287

00:35:03.130 --> 00:35:12.779

Seraphine Maerz: Like, with the internet, there was also this risk already that, you know, we had felt, like, disinformation, false information, and all of that already circulating.

288

00:35:12.990 --> 00:35:14.330

Seraphine Maerz: But,

289

00:35:19.950 --> 00:35:24.050

Seraphine Maerz: I think it's much more powerful now in shifting

290

00:35:24.170 --> 00:35:27.760

Seraphine Maerz: What people perceive of different things.

291

00:35:30.860 --> 00:35:41.310

Seraphine Maerz: And, I mean, it, it, it, like, this polarization, and everything, what comes along with it is also then much more profound now.

292

00:35:43.720 --> 00:35:47.580

Seraphine Maerz: And, like, as you say, also in a positive,

293

00:35:47.930 --> 00:35:51.969

Seraphine Maerz: interpretation of AI in, for example.

294

00:35:52.120 --> 00:36:00.740

Seraphine Maerz: governance, this could be still a problem, right? Because AI could... Dilute,

295

00:36:01.700 --> 00:36:09.440

Seraphine Maerz: like, if I think about automated decision making, are these things still validated?

296

00:36:09.800 --> 00:36:16.690

Seraphine Maerz: Is this still grounded in, in realities, or is, is it maybe,

297

00:36:17.390 --> 00:36:24.040

Seraphine Maerz: Then, simulating some kind of, yeah.

298

00:36:24.880 --> 00:36:33.080

Seraphine Maerz: Political process, which is not so much... Connected anymore to what's happening?

299

00:36:33.080 --> 00:36:44.850

MaxGroemping: I think this... I think that's real, because you could imagine that, you know, the support and demands that go in are already based on false... could be based on false information. They could be astroturfed.

300

00:36:44.950 --> 00:36:56.810

MaxGroemping: and created by bots at the same time. Then, interest groups are already writing their submissions to Parliament with AI, with hallucinated citations.

301

00:36:56.870 --> 00:37:05.199

MaxGroemping: That's just one aspect of the throughput. So then you have some output that is created through automated decision-making based on

302

00:37:05.750 --> 00:37:17.370

MaxGroemping: those diluted inputs. So you can, you know, if you want to tell the bad story, it is around a newly created false reality, almost.

303

00:37:17.560 --> 00:37:19.630

MaxGroemping: Like, a simulation.

304

00:37:19.800 --> 00:37:23.239

MaxGroemping: So that's sort of the bad... the bad endpoint.

305

00:37:23.830 --> 00:37:24.360

MaxGroemping: And...

306

00:37:24.360 --> 00:37:32.050

Seraphine Maerz: That is true for both directions, and maybe we should also clearly position ourselves here, right? I mean, I'm a skeptical...

307

00:37:32.450 --> 00:37:47.040

Seraphine Maerz: AI user anyway, but, like, this... the fact that you need to validate and make sure that, you know, the tool does what it is intended to do is also true in all those positive use cases.

308

00:37:47.040 --> 00:38:00.920

Seraphine Maerz: And, who can actually still do that? And we have all experienced it, even with this concept node, like, you know, it produces quite a lot very quickly, and are we actually still able to thoroughly check

309

00:38:01.030 --> 00:38:10.010

Seraphine Maerz: what it produces. And, I mean, we do now, and, and, I believe that, you know, many...

310

00:38:10.820 --> 00:38:21.579

Seraphine Maerz: Government bodies probably also put a lot of effort in still checking, but how realistic is that in the future, if everything...

311

00:38:22.090 --> 00:38:31.089

Seraphine Maerz: accelerates, and the amount of, AI-generated, Outputs, increases.

312

00:38:33.570 --> 00:38:38.680

MaxGroemping: my reading of the Beth Novak argument is that

313

00:38:39.390 --> 00:38:45.649

MaxGroemping: the antidote is the same as the poison, basically, right? So it can help make

314

00:38:45.760 --> 00:38:53.709

MaxGroemping: the simulated inputs and the bad automated decision

legible again? Like, the very same tools can be both.

315

00:38:54.080 --> 00:39:06.289

MaxGroemping: And it hinges on the design of the AI system, so for what they are optimized. Are they optimized for engagement?

316

00:39:06.600 --> 00:39:11.180

MaxGroemping: And staying on the website, or are they optimized for

317

00:39:11.660 --> 00:39:18.550

MaxGroemping: democracy, or whatever. So that's her whole point about the democratic AI. So it is essentially, not...

318

00:39:19.580 --> 00:39:23.090

MaxGroemping: It is neither... so it's not a given that it would go

319

00:39:23.230 --> 00:39:32.200

MaxGroemping: Into the, sort of, simulated responsiveness, downward spiral, or into the hyper-responsive like...

320

00:39:32.800 --> 00:39:49.550

MaxGroemping: ever more resilient, positive spiral, but that it... that this is where the action happens. So, how do you procure the system? How do you design the system? How do you pre-train the system with what optimization? So that is kind of the agency that's in there.

321

00:39:50.360 --> 00:40:08.599

Dr. Constanza Sanhueza: One thing that I haven't seen in Obec's book on that regard, however, is the interaction of the different AIs, because if you have a democratic AI that is being used by public officials, citizens that are forming their opinions and submitting opinions and, you know, voting on things, they might be using these commercial AIs.

322

00:40:08.850 --> 00:40:12.260

Dr. Constanza Sanhueza: So the input is slightly different.

323

00:40:13.400 --> 00:40:22.129

Dr. Constanza Sanhueza: And so there is a disconnect. So you... so if you want to use democratic AI, which happens on the side of the government.

324

00:40:22.280 --> 00:40:30.100

Dr. Constanza Sanhueza: You need to make sure that citizens are engaging with that democratic AI to provide feedback or provide inputs.

325

00:40:30.770 --> 00:40:34.980

Dr. Constanza Sanhueza: Not the private... AI.

326

00:40:35.280 --> 00:40:36.390

Dr. Constanza Sanhueza: Yeah. I...

327

00:40:41.880 --> 00:40:43.710

Seraphine Maerz: Meeting.

328

00:40:43.950 --> 00:41:02.740

MaxGroemping: on the level of the, you know, what do we call the innovation, or what is the revolution? So I noted down at the end, pretty mundane words still, so the speed, the scale, the integration, the translation, and action.

329

00:41:02.820 --> 00:41:08.330

MaxGroemping: Are all parts of what Makes this a revolution.

330

00:41:10.070 --> 00:41:15.520

MaxGroemping: And they are independent of... what...

331

00:41:16.030 --> 00:41:25.010

MaxGroemping: area of resilience we look at. They're independent of what type of AI, commercial, democratic, we look at. They are just kind of

332

00:41:25.230 --> 00:41:31.640

MaxGroemping: the capabilities That make this technology different.

333

00:41:32.320 --> 00:41:35.330

MaxGroemping: But not any single one of them, but all of them together.

334

00:41:35.520 --> 00:41:47.439

Seraphine Maerz: Yeah, and I think this... shifting realities, something like that is missing in this list. I have the same list, but I'm still looking like it's this, you know, this capacity of...

335

00:41:50.100 --> 00:41:55.449

MaxGroemping: You want to call it hallucination? I know that's very specific, but it is...

336

00:41:55.450 --> 00:41:58.120

Seraphine Maerz: hallucination, because it the tool.

337

00:41:58.490 --> 00:41:58.950

MaxGroemping: specific.

338

00:41:59.020 --> 00:42:05.130

Seraphine Maerz: But it gives humans the wrong impression of what's going... like, it's, it's,

339

00:42:07.990 --> 00:42:10.670

Dr. Constanza Sanhueza: But, Seraphine, could it be corrective as well?

340

00:42:10.930 --> 00:42:14.829

Dr. Constanza Sanhueza: Or is it only the... You're only increasing the margin of error.

341

00:42:15.020 --> 00:42:16.650

Dr. Constanza Sanhueza: Could it also be corrective?

342

00:42:19.090 --> 00:42:30.050

MaxGroemping: It clearly is. Like any study I read about chatbots is that they reduce conspiracy theory, reduce climate skepticism, and make perceptions of election integrity better.

343

00:42:34.520 --> 00:42:42.400

Seraphine Maerz: So, how do we want to call this? It does something with the human perception, right? With...

344

00:42:42.980 --> 00:42:44.140

MaxGroemping: Persuasion.

345

00:42:44.920 --> 00:42:45.870

Dr. Constanza Sanhueza: Mmm.

346

00:42:46.260 --> 00:42:49.480

Dr. Constanza Sanhueza: So, so there is, there is, there is a truth

347

00:42:50.770 --> 00:42:55.310

Dr. Constanza Sanhueza: Unknown truth, and then humans are in a distribution around it.

348

00:42:56.460 --> 00:43:05.009

Dr. Constanza Sanhueza: Right? And then there might be different technologies that might decrease, kind of, Make that distribution...

349

00:43:05.120 --> 00:43:08.520

Dr. Constanza Sanhueza: Closer to the truth, or further away, right?

350

00:43:08.520 --> 00:43:11.449

Seraphine Maerz: Shaping human perceptions.

351

00:43:13.280 --> 00:43:14.530

MaxGroemping: That's persuasion.

352

00:43:14.770 --> 00:43:15.550

Seraphine Maerz: Yep.

353

00:43:15.550 --> 00:43:16.429

MaxGroemping: I think...

354

00:43:16.620 --> 00:43:17.180

Dr. Constanza Sanhueza: But...

355

00:43:17.460 --> 00:43:26.549

Dr. Constanza Sanhueza: But I associate persuade... well, it's not necessarily, but I associate it negatively, and I think it could have a corrective. It could. Not saying that it has, but...

356

00:43:26.900 --> 00:43:35.229

Seraphine Maerz: And persuasion is more like, active, right? Like, an agenda behind it, and, AI either.

357

00:43:35.370 --> 00:43:40.310

Seraphine Maerz: Might have that agenda, but this is something where we have very limited...

358

00:43:40.530 --> 00:43:49.200

Seraphine Maerz: means to empirically analyze this, or someone else has that agenda and uses that AI, and then is it still...

359

00:43:49.800 --> 00:43:51.090

Seraphine Maerz: Persuasion?

360

00:43:53.900 --> 00:43:54.570

MaxGroemping: Hmm.

361

00:43:56.770 --> 00:44:12.889

MaxGroemping: But it is... it is a capability that is different from other technologies who... who... and I think it's... it's connected... well, actually, it's not only connected to language, because it's also the multimodal aspect, that production of

362

00:44:12.980 --> 00:44:17.350

MaxGroemping: Synthetic videos, synthetic images, synthetic language.

363

00:44:19.560 --> 00:44:28.410

MaxGroemping: In a sort of a genre that humans can understand immediately, because it's tailored to our senses, yeah.

364

00:44:28.720 --> 00:44:30.939

Seraphine Maerz: So, some kind of simulation.

365

00:44:32.160 --> 00:44:36.319

Seraphine Maerz: Because even if it's corrective, it simulates something.

366

00:44:38.060 --> 00:44:48.260

Seraphine Maerz: So, if, if, if, if, if, it helps to... Raise the awareness of, disinformation...

367

00:44:48.670 --> 00:44:51.929

Seraphine Maerz: It still does that by simulating something.

368

00:44:52.900 --> 00:44:59.690

Dr. Constanza Sanhueza: the way I see it, not... I don't see it as simulating, I think I'm outsourcing my thinking.

369

00:44:59.840 --> 00:45:11.859

Dr. Constanza Sanhueza: Instead of going there and reading a lot of things, trying to come up with a conclusion, I go, okay, how about this? Gives me a thing I assess, right? So, it's outsourcing some part of

370

00:45:12.560 --> 00:45:18.750

Dr. Constanza Sanhueza: The collecting of information, summarizing of information, and taking a position.

371

00:45:20.800 --> 00:45:27.810

Seraphine Maerz: I think that's good. We can't call it like that, but I think that outsourcing thought, I think that is good.

372

00:45:28.720 --> 00:45:32.230

Seraphine Maerz: And that's, that's something which we could not do before.

373

00:45:33.190 --> 00:45:36.859

Seraphine Maerz: Like, with none of the threats before,

374

00:45:37.900 --> 00:45:46.319

Dr. Constanza Sanhueza: The closest would be maybe a research assistant that you say, go on through all of this, tell me these things, right? So you have this little robot now.

375

00:45:46.450 --> 00:45:47.120

Seraphine Maerz: Yep.

376

00:45:47.120 --> 00:45:49.509

Dr. Constanza Sanhueza: That is supposedly doing that for you, but...

377

00:45:50.930 --> 00:45:51.770

MaxGroemping: That's my pleasure.

378

00:45:51.770 --> 00:45:52.320

Dr. Constanza Sanhueza: Yeah.

379

00:45:52.570 --> 00:46:00.390

MaxGroemping: I think it's called... I thought I've read something about it, called cognitive offloading, in the literature.

380

00:46:00.530 --> 00:46:01.650

Dr. Constanza Sanhueza: Offloading.

381

00:46:01.650 --> 00:46:03.320

MaxGroemping: cognitive offloading.

382

00:46:06.480 --> 00:46:10.180

Seraphine Maerz: So, democratic offloading, or something like that, like...

383

00:46:12.860 --> 00:46:14.370

Dr. Constanza Sanhueza: Yeah, interesting.

384

00:46:15.610 --> 00:46:20.670

Seraphine Maerz: But it's good, I can't put it in words yet, but I like this,

385

00:46:21.950 --> 00:46:27.960

Seraphine Maerz: this resonates with how I also perceive of AI in terms of

386

00:46:28.180 --> 00:46:32.320

Seraphine Maerz: what it does to democracy. It's... it's kind of... M...

387

00:46:35.900 --> 00:46:42.920

Seraphine Maerz: Taking over is too much, but it has this impact Which has to do...

388

00:46:43.290 --> 00:46:52.800

Seraphine Maerz: With... with this offloading, with this outsourcing, with citizens... Becoming less...

389

00:46:55.710 --> 00:46:59.680

MaxGroemping: It's taking, somehow, agency, away.

390

00:46:59.680 --> 00:47:00.300

Seraphine Maerz: Yeah.

391

00:47:00.300 --> 00:47:08.170

MaxGroemping: And all the institutions, and the whole political system, with its inputs, throughputs, and outputs, is all based on

392

00:47:08.530 --> 00:47:14.070

MaxGroemping: Humans being... The only possible

393

00:47:14.750 --> 00:47:24.149

MaxGroemping: kind of entities of consequence in there, basically.

Like, the only agents that can give demands and support, the only agents that can

394

00:47:24.300 --> 00:47:27.380

MaxGroemping: Process the throughputs through the institutions.

395

00:47:27.610 --> 00:47:30.270

MaxGroemping: Etc. And this offloading, kind of.

396

00:47:30.390 --> 00:47:33.630

MaxGroemping: give... takes Texas agency a little bit away.

397

00:47:34.210 --> 00:47:49.090

Dr. Constanza Sanhueza: So it acts like a... it acts like lenses. But one thing is, how important is information processing to democracy? Because as a voter, you need to collect information and make an assessment of what the best

398

00:47:49.310 --> 00:47:59.259

Dr. Constanza Sanhueza: you know, candidate would be. As an elected candidate, you need to kind of collect and process information about what the needs in your constituency are, what the emergencies are, what the five...

399

00:47:59.370 --> 00:48:02.280

Dr. Constanza Sanhueza: You know, 5-year objectives should be...

400

00:48:02.700 --> 00:48:09.959

Dr. Constanza Sanhueza: And now we are using this little tool here, like little calculator, little robot, to tell me, give me some inputs on that.

401

00:48:11.460 --> 00:48:27.969

Dr. Constanza Sanhueza: with the risks this could have, I mean, it could be corrective, it's a good system, it gives you ideas you were not thinking about, but it also could be that these models are built for a different purpose, processing different type of information, and then it kind of misleads

402

00:48:28.480 --> 00:48:30.369

Dr. Constanza Sanhueza: You in that process.

403

00:48:32.010 --> 00:48:34.890

Seraphine Maerz: I, like, I think it's, it's...

404

00:48:35.120 --> 00:48:47.150

Seraphine Maerz: It's all about information. This is also why we called it informationalism, authoritarian informationalism, whatever, but I think it's all about information. It's so important. Information is key.

405

00:48:48.330 --> 00:48:55.049

Seraphine Maerz: In this entire democratic process, in this throughput mechanism, like, it's all about...

406

00:48:55.890 --> 00:49:15.249

Seraphine Maerz: information. Can we agree to that? And then, I think the difference is that it has agency in this informationalism. Like, before, this informationalism was basically just a competing fight over who has authority over this information.

407

00:49:15.480 --> 00:49:31.740

Seraphine Maerz: And, whether AI has agency or not is probably something we shouldn't touch too much, but that AI inherently has this capacity of having agency over information.

408

00:49:31.920 --> 00:49:38.760

Seraphine Maerz: That is something which is new, because before, like...

409

00:49:39.030 --> 00:49:51.679

Seraphine Maerz: the internet, or social media, and so on. These were all tools where this war of information, like these competing fights over who has authority over information, took place.

410

00:49:51.980 --> 00:49:59.470

Seraphine Maerz: But, and these tools and platforms helped a lot in, biasing.

411

00:49:59.470 --> 00:50:12.500

Seraphine Maerz: different perspectives, and giving different power shares, and in introducing asymmetries and everything, but the tools were always kind of neutral in terms of

412

00:50:12.560 --> 00:50:17.960

Seraphine Maerz: Interpreting the information.

413

00:50:19.410 --> 00:50:36.709

Seraphine Maerz: And maybe this is then also connected to what I meant before, that it's now connecting the dots. It can... it can not just spread, but also make something out of what is communicated. So it's taking part in this competing,

414

00:50:36.910 --> 00:50:43.510

Seraphine Maerz: Fight over... What kind of information Goes through the process.

415

00:50:43.970 --> 00:50:55.619

Dr. Constanza Sanhueza: Right. I think, however, there was an instance prior to AI that was based on these algorithms, either on social media or the internet, that already was doing a bit of that.

416

00:50:56.310 --> 00:50:58.919

Dr. Constanza Sanhueza: But now, this is another level.

417

00:50:59.460 --> 00:51:05.630

Seraphine Maerz: But the algorithms are AI. I mean, the algorithms... like, what do you mean? Like, you know...

418

00:51:05.630 --> 00:51:18.389

Dr. Constanza Sanhueza: what information you could see on Twitter, for example, right? It got... I mean, Facebook was a clear example, right? We could see the content of our friends. All of a sudden, you saw whatever content, then it was yet another content. Yes.

419

00:51:18.390 --> 00:51:19.230

MaxGroemping: Eden.

420

00:51:19.230 --> 00:51:26.280

Dr. Constanza Sanhueza: But now we can have a dialogue with it, independently of what my friend posted and what's being posted by other people.

421

00:51:26.540 --> 00:51:32.559

Dr. Constanza Sanhueza: Right? So it's like, I think it's just that process, but now it has this interface.

422

00:51:33.120 --> 00:51:34.910

Dr. Constanza Sanhueza: That I can interact with.

423

00:51:34.910 --> 00:51:39.699

Seraphine Maerz: Yeah, but I think the algorithms are early AI

already, you know?

424

00:51:40.160 --> 00:51:44.689

Dr. Constanza Sanhueza: So you would put it as part of the problem, you would pack it with this, yeah.

425

00:51:49.470 --> 00:51:58.890

MaxGroemping: I think the science and technology studies people would just tell us, duh, it is, of course, an agent.

426

00:51:59.080 --> 00:52:05.010

MaxGroemping: Like every other technology, maybe... It just took us... you know...

427

00:52:05.210 --> 00:52:13.800

MaxGroemping: Until now, to really realize it. So, maybe this whole discussion is actually part of this ability to...

428

00:52:15.590 --> 00:52:22.409

MaxGroemping: at least appear as an agent that interprets and lets us offload.

429

00:52:23.050 --> 00:52:27.770

MaxGroemping: Not even getting into weather, like, what it can do in terms of

430

00:52:29.550 --> 00:52:43.150

MaxGroemping: material actions, but just as an agent in this information system. And by the way, Seraphine, I think we can agree that information is key. The whole political systems theory is just an information

431

00:52:43.260 --> 00:52:49.990

MaxGroemping: feedback loop system. We just need to put it in a footnote somewhere, I think, to say there are other views.

432

00:52:50.280 --> 00:52:51.200

MaxGroemping: of what

433

00:52:51.320 --> 00:52:57.060

MaxGroemping: the political system is, and they're not based on information, I could just, kind of as a disclaimer.

434

00:52:58.620 --> 00:52:59.280
Seraphine Maerz: Yep.

435
00:53:05.580 --> 00:53:10.850
MaxGroemping: By the way, I did like...

436
00:53:12.770 --> 00:53:16.580
MaxGroemping: this article, in Nature, Human Behavior.

437
00:53:16.680 --> 00:53:33.680
MaxGroemping: the impact of advanced AI systems, and they had the epistemic, material, and foundational impacts. And again, just as a side note, at least for our benefit, that is incorporated in our model as well. You mentioned the external shocks.

438
00:53:34.420 --> 00:53:48.000
MaxGroemping: to the feedback system, and then also there are the sort of social, economic, and environmental foundations or enabling environments, and II does have an impact on those.

439
00:53:48.270 --> 00:53:51.220
MaxGroemping: Because of its impact on labor market and...

440
00:53:52.800 --> 00:54:02.900
MaxGroemping: energy consumption and stuff, so we're obviously not going to focus on that, but it's, like, there as well, that it does have impact on resilience, I think.

441
00:54:03.620 --> 00:54:06.160
Seraphine Maerz: Which article are you referring to?

442
00:54:06.370 --> 00:54:14.960
MaxGroemping: The, the, the... Where is this?

443
00:54:16.430 --> 00:54:18.440
MaxGroemping: Of course, copy the link.

444
00:54:20.110 --> 00:54:23.040
MaxGroemping: Summerfield... At all.

445
00:54:23.760 --> 00:54:25.130
MaxGroemping: I put it in the chat.

446

00:54:26.250 --> 00:54:30.860

Seraphine Maerz: And isn't that also connected to, Ajemoroglu?

447

00:54:32.080 --> 00:54:32.850

MaxGroemping: Mmm.

448

00:54:34.460 --> 00:54:39.570

MaxGroemping: You mean this recent, this recent, like, formal model?

449

00:54:39.570 --> 00:54:40.210

Seraphine Maerz: Yep.

450

00:54:40.210 --> 00:54:40.750

MaxGroemping: No.

451

00:54:45.380 --> 00:54:50.070

MaxGroemping: it makes repression more likely. That was kind of the headline of that, right?

452

00:54:50.860 --> 00:54:51.900

Seraphine Maerz: Yep.

453

00:54:53.270 --> 00:54:58.540

Seraphine Maerz: But repression is, impact on... What is communicated?

454

00:54:59.670 --> 00:55:00.310

MaxGroemping: Yes.

455

00:55:08.640 --> 00:55:12.210

MaxGroemping: We might be approaching diminishing returns,

456

00:55:12.890 --> 00:55:21.089

MaxGroemping: At least I find, like, I find it in my head, but I think this is, like, very, very...

457

00:55:22.800 --> 00:55:24.419

MaxGroemping: It's... is getting us.

458

00:55:24.990 --> 00:55:26.849

MaxGroemping: Somewhere, isn't it?

459

00:55:27.360 --> 00:55:31.310

Seraphine Maerz: Yeah, I think we just need to, let it settle a little.

460

00:55:32.610 --> 00:55:34.869

Seraphine Maerz: And,

461

00:55:35.980 --> 00:55:44.719

Seraphine Maerz: keep thinking about it, but I think we came to very good conclusions, and, this will help to also,

462

00:55:44.960 --> 00:55:48.040

Seraphine Maerz: Provides this, what we have here now.

463

00:55:48.370 --> 00:55:55.390

Seraphine Maerz: And, now looking, looking at what, what is left from, okay, so, all the...

464

00:55:55.510 --> 00:55:59.180

Seraphine Maerz: Two-stage stuff goes out, and,

465

00:55:59.580 --> 00:56:04.230

Seraphine Maerz: It becomes more dynamic and everything, but then now, looking at the working packages.

466

00:56:04.540 --> 00:56:13.330

Seraphine Maerz: I mean, what is then still important is the working package, like, maybe we need also more on...

467

00:56:13.670 --> 00:56:23.099

Seraphine Maerz: information and, You know, information environments, we have now one, but, it's also...

468

00:56:24.440 --> 00:56:29.670

Seraphine Maerz: Like, maybe we need to, to, like, then...

469

00:56:31.270 --> 00:56:48.939

Seraphine Maerz: maybe information is the umbrella term, and then we narrow down to different aspects of disinformationalism, or this fight about information. So we don't just have one package on information environments, and then we cover other things.

470

00:56:48.940 --> 00:56:54.890

Seraphine Maerz: But we acknowledge that, actually, information is key here for all packages.

471

00:56:56.240 --> 00:57:07.619

Seraphine Maerz: And that would also help us, for example, with the political economy package, and, like, those packages where we, are not so sure yet, and, and,

472

00:57:08.580 --> 00:57:19.860

Seraphine Maerz: Like, one thing I remember from Lytia was that they had this, turning, or this, this crucial point they reached, within the core workshop

473

00:57:20.750 --> 00:57:25.899

Seraphine Maerz: group, where we kind of had to decide whether we rather want to go abroad.

474

00:57:26.050 --> 00:57:30.730

Seraphine Maerz: With their proposal, or if they want to be brave enough.

475

00:57:30.920 --> 00:57:35.550

Seraphine Maerz: To just focus on one aspect, and then really

476

00:57:35.870 --> 00:57:39.559

Seraphine Maerz: Spell this out in all details needed.

477

00:57:40.110 --> 00:57:43.770

Seraphine Maerz: And maybe we should also be more... more bold here?

478

00:57:43.920 --> 00:57:49.269

Seraphine Maerz: By making this, theoretical claim about informationalism.

479

00:57:49.550 --> 00:57:52.540

Seraphine Maerz: And how AI has agency here?

480

00:57:52.660 --> 00:58:10.850

Seraphine Maerz: and then spell out in detail what this means in terms of work packages. Does that make sense? Instead of broadly covering this huge topic of AI and democratic resilience, and then covering it a little bit from the political economy side, and from this and that and that perspective.

481

00:58:11.040 --> 00:58:20.620

Seraphine Maerz: Rather just saying, okay, we focus on information... information.

482

00:58:21.120 --> 00:58:21.700

Seraphine Maerz: Hmm.

483

00:58:23.390 --> 00:58:26.320

MaxGroemping: It's... it's a... it... and... and based on the...

484

00:58:27.140 --> 00:58:39.050

MaxGroemping: assumption that information is the currency that flows through the feedback loop at every stage, and you can translate actions into information

485

00:58:39.370 --> 00:58:41.779

MaxGroemping: Yeah, okay.

486

00:58:41.890 --> 00:58:47.770

MaxGroemping: But... but... and... and how... so they decided to do... to focus on just one aspect, yeah?

487

00:58:47.770 --> 00:58:54.740

Seraphine Maerz: Yeah, they have this concept, what was it called, interscalar,

488

00:58:57.040 --> 00:59:02.450

Seraphine Maerz: Like, that authoritarianism is... is not being... like, you cannot scale it.

489

00:59:04.300 --> 00:59:06.550

Seraphine Maerz: And that was their major claim.

490

00:59:10.400 --> 00:59:14.860

MaxGroemping: And then they looked at that from different, all different angles, okay?

491

00:59:14.990 --> 00:59:16.530

Seraphine Maerz: Yeah.

492

00:59:16.880 --> 00:59:27.039

Seraphine Maerz: And then they, they start, you know, with very, regional, small, community examples.

493

00:59:27.260 --> 00:59:31.059

Seraphine Maerz: And move it up to,

494

00:59:34.190 --> 00:59:53.349

Seraphine Maerz: interstate communication cases, or I don't know, like, I don't remember from the top of my head, but it's... the main thing she said was that it was a very critical decision that they rather focused on this particular view.

495

00:59:53.940 --> 00:59:56.680

Seraphine Maerz: And then spelled it out in detail.

496

00:59:56.930 --> 01:00:02.049

Seraphine Maerz: Than trying to cover, because the call was also rather broad, and

497

01:00:02.580 --> 01:00:07.429

Seraphine Maerz: I don't remember how the call was called, but our call is also very broad, right?

498

01:00:07.580 --> 01:00:11.559

Seraphine Maerz: And then we kind of come up with this very broad title.

499

01:00:11.800 --> 01:00:16.429

Seraphine Maerz: AI and democratic resilience, and maybe now we should really...

500

01:00:16.730 --> 01:00:33.010

Seraphine Maerz: either stay abroad to cover, you know, to get, interests from a possibly large number of people who decide about this, or we say, no, we come up now with this unique framework.

501

01:00:33.530 --> 01:00:39.030

Seraphine Maerz: And we accept that our work packages do not cover each and everything.

502

01:00:42.320 --> 01:00:59.340

Seraphine Maerz: And from what, like, the people we currently have, it seems to me... it seems to be the more clever strategy right now, because we do have quite a lot of people covering information,

language, text...

503

01:00:59.620 --> 01:01:01.570

Seraphine Maerz: Analysis...

504

01:01:05.640 --> 01:01:20.289

MaxGroemping: I agree on that, and I think it has a unique selling point as well, because it is theoretically informed, and based on that theory and broader model, we pick out one component.

505

01:01:20.710 --> 01:01:29.060

MaxGroemping: But what I'm struggling with is what the, sort of, Like, how do you slice?

506

01:01:29.880 --> 01:01:34.710

MaxGroemping: the object of inquiry in different ways.

507

01:01:36.400 --> 01:01:46.049

MaxGroemping: is what I'm... what I'm struggling with. So I can see, for example, the... so... so different scales of looking at the problem in that other project. I can understand that.

508

01:01:46.170 --> 01:01:53.819

MaxGroemping: because what it should not be, in my view, is just,

509

01:01:54.850 --> 01:02:05.159

MaxGroemping: an anecdotal thing, so we have, like, we look at this one thing here, but it's actually part of a bigger thing, and then we look at a big thing here.

510

01:02:05.470 --> 01:02:10.149

MaxGroemping: And the two are just very uncomparable, in a way.

511

01:02:10.460 --> 01:02:21.560

Seraphine Maerz: No, we just spell out what means, informationalism, and that AI has an agency in this informationalism.

512

01:02:21.560 --> 01:02:37.589

Seraphine Maerz: for all the different areas which we partly already identified. For example, participation, right? You also, like, this is also a key part in the call, so we definitely need to cover participation. So, we don't call it participation, but we call it,

513

01:02:38.070 --> 01:02:44.340

Seraphine Maerz: Or maybe we call it participation, but what we actually then analyze in this perk package is...

514

01:02:44.530 --> 01:02:53.799

Seraphine Maerz: How does... the fact that AI has an agency in

515

01:02:54.370 --> 01:03:00.779

Seraphine Maerz: What kind of information is important for participation? How does this change participation?

516

01:03:02.170 --> 01:03:12.560

Seraphine Maerz: and for every diff... like, we might also, you know, come up with different components here, but I think participation is definitely something we need to...

517

01:03:12.780 --> 01:03:28.580

Seraphine Maerz: cover attitudes and behavior. Is there not attitudes and behavior? But rather the question, how are attitudes and behavior shaped by the fact that AI has an agency in the informational streams?

518

01:03:28.770 --> 01:03:38.900

Seraphine Maerz: Which are relevant here. And then power... Surveillance and digital repression,

519

01:03:41.410 --> 01:03:44.869

MaxGroemping: Okay, maybe... I get it now, so...

520

01:03:45.180 --> 01:03:49.239

Dr. Constanza Sanhueza: To me, that power part goes either in the throughput.

521

01:03:49.550 --> 01:03:55.459

Dr. Constanza Sanhueza: Or in the output, too. So, but it's that connection, because it's how that information is shared.

522

01:03:56.260 --> 01:04:04.489

Dr. Constanza Sanhueza: You know, with the public and all of that, so I think if you think about the throughput, it can be put there. Well...

523

01:04:04.490 --> 01:04:20.840

Seraphine Maerz: Yeah, maybe we need to first, define what is in

our... maybe now we need to, indeed, let AI go out of the picture, at least for a little while. First, clearly define this, input demand

524

01:04:21.010 --> 01:04:24.419

Seraphine Maerz: Thing, throughput, output feedback?

525

01:04:25.970 --> 01:04:28.099

Seraphine Maerz: Pretending there's no AI yet?

526

01:04:28.100 --> 01:04:28.810

MaxGroemping: Yeah.

527

01:04:29.330 --> 01:04:34.450

Seraphine Maerz: And then we have all important components, defined.

528

01:04:35.100 --> 01:04:41.010

Seraphine Maerz: And then we take those important components, and they form... Work packages.

529

01:04:42.400 --> 01:04:45.139

Seraphine Maerz: In... and in each Work package.

530

01:04:45.420 --> 01:04:49.710

Seraphine Maerz: We don't deal with those components alone, but we ask the question.

531

01:04:50.970 --> 01:05:02.039

Seraphine Maerz: How does the fact... we still need to find a better expression for this... that AI has agency over information streams? How does this change

532

01:05:02.630 --> 01:05:04.409

Seraphine Maerz: This and that component.

533

01:05:04.670 --> 01:05:05.210

Dr. Constanza Sanhueza: Damn.

534

01:05:05.320 --> 01:05:06.640

Dr. Constanza Sanhueza: Yeah.

535

01:05:06.640 --> 01:05:09.889

Seraphine Maerz: Then we might also come up with better names,

536

01:05:11.440 --> 01:05:12.090

Dr. Constanza Sanhueza: Yeah.

537

01:05:12.090 --> 01:05:16.139

MaxGroemping: So, for the structure, it means,

538

01:05:16.280 --> 01:05:29.659

MaxGroemping: define resilience based on an informational feedback loop model that has inputs, throughputs, and outputs. And at each stage, each of these three stages, the system

539

01:05:29.790 --> 01:05:35.770

MaxGroemping: has... properties that make it more or less resilient. I think we need to specify these.

540

01:05:36.320 --> 01:05:40.039

MaxGroemping: Second is define the...

541

01:05:40.190 --> 01:05:50.009

MaxGroemping: the new thing that it is about AI, and we have identified from several angles and give it a name.

542

01:05:51.160 --> 01:06:02.090

MaxGroemping: And then third... move to the work packages and... and ask consistently the question, what does it... does... AI...

543

01:06:02.640 --> 01:06:04.040

MaxGroemping: Word X.

544

01:06:05.000 --> 01:06:13.090

MaxGroemping: mean for... That attribute in the... Resilience, loop model.

545

01:06:16.020 --> 01:06:25.590

Dr. Constanza Sanhueza: I think that we... I'm not sure, Seraphine you were mentioning to kind of move the section on democratic resilience onset and breakdown, or take it out.

546

01:06:26.050 --> 01:06:29.069

Seraphine Maerz: Out, out, don't worry about it. This was just...

547

01:06:29.070 --> 01:06:30.619
Dr. Constanza Sanhueza: But I... but I think it...

548
01:06:30.620 --> 01:06:31.410
Seraphine Maerz: something.

549
01:06:31.650 --> 01:06:35.719
Dr. Constanza Sanhueza: But I think it should be there in some capacity, because

550
01:06:35.930 --> 01:06:39.010
Dr. Constanza Sanhueza: While we are measuring all that resilience.

551
01:06:39.170 --> 01:06:43.820
Dr. Constanza Sanhueza: We need to measure whether the country's being resilient, right?

552
01:06:43.820 --> 01:06:59.110
Seraphine Maerz: Okay, okay, we... yeah, I just wanted to signal, I don't care about the framework. I care about getting your good design in place, so whatever it needs, and yeah, you're right, for the selection, also, like, for this contrast.

553
01:06:59.110 --> 01:07:17.390
Seraphine Maerz: for the selling point we now have, which I think is good, that, you know, we compare, kind of, European with Southeast Asian cases, it's probably good to classify whether it's an onset resilient or a breakdown resilient case, and so on.

554
01:07:17.390 --> 01:07:31.520
Seraphine Maerz: So I'm fine with leaving it in there, but this is then probably more important for specific work packages. For example, work packages who do comparative case studies also.

555
01:07:31.520 --> 01:07:39.480
Seraphine Maerz: But the overall framework, I think in the overall framework, it's probably not so important any longer. It's, it's,

556
01:07:39.520 --> 01:07:42.490
Seraphine Maerz: We will probably still mention it, but,

557
01:07:42.940 --> 01:07:56.760
Seraphine Maerz: Yeah, I think this... I like this overall framework, which shapes in my mind, and in yours probably too. So, I think what

you suggested as,

558

01:07:56.910 --> 01:08:00.950

Seraphine Maerz: Next steps, Max? I think that's... that's the way to go.

559

01:08:06.200 --> 01:08:16.139

Seraphine Maerz: How should we do this? I still have a little bit of time today, and while, it's fresh, I can have a go.

560

01:08:16.540 --> 01:08:20.379

Seraphine Maerz: And then we can all add, or what do you suggest?

561

01:08:21.850 --> 01:08:24.140

Seraphine Maerz: Because I think Constanza needs to go soon, right?

562

01:08:24.140 --> 01:08:25.770

Dr. Constanza Sanhueza: Yeah, I need to go and pick up the kids soon.

563

01:08:25.770 --> 01:08:26.330

Seraphine Maerz: Yeah.

564

01:08:26.899 --> 01:08:42.869

MaxGroemping: we can do that, and then maybe next we could sequence a little bit, or do a division of labor, one of the two. So we can either do, okay, I, you know, you have it for two days, I have it for two days, etc. Or we could say.

565

01:08:43.429 --> 01:08:55.209

MaxGroemping: One of us fleshes out the loop model, one of us really kind of conceptualizes the... new AI agency.

566

01:08:55.589 --> 01:08:56.549

MaxGroemping: Thing?

567

01:08:57.289 --> 01:08:59.949

MaxGroemping: I think both could be viable approaches.

568

01:09:12.290 --> 01:09:18.410

Seraphine Maerz: I think, what would help is probably having a rough draft to start with.

569

01:09:18.700 --> 01:09:21.889

Seraphine Maerz: And then, different people,

570

01:09:22.140 --> 01:09:35.769

Seraphine Maerz: spelling out different elements of that rough draft, but I think a rough draft would help us, because I think otherwise we risk, getting lost in details, and, for the work packages, like the third step.

571

01:09:35.960 --> 01:09:44.779

Seraphine Maerz: we really need to come up with names very soon. So, I can spend some more time today to make this very rough draft.

572

01:09:47.189 --> 01:09:58.720

Seraphine Maerz: Basically, a substantial update to what we have in place now, because some of the stuff is also still useful, like the argumentation with the regional angle and so on.

573

01:09:58.720 --> 01:09:59.240

MaxGroemping: Yeah.

574

01:09:59.240 --> 01:10:12.239

Seraphine Maerz: And I will only roughly draft, the components, and I might also forget some really important ones and so on, so it will be very,

575

01:10:12.970 --> 01:10:14.250

Seraphine Maerz: Unfinished?

576

01:10:15.520 --> 01:10:20.019

Seraphine Maerz: But it will give us a structure to work with, and then you can...

577

01:10:20.360 --> 01:10:27.350

Seraphine Maerz: help adding, components to, to the democratic resilience Framework.

578

01:10:27.840 --> 01:10:36.239

Seraphine Maerz: And, whenever we add a component to the democratic resilience Framework, we also do step 3.

579

01:10:37.300 --> 01:10:40.539

Seraphine Maerz: Thinking about what kind of work package that is,

then?

580

01:10:42.610 --> 01:10:53.900

Seraphine Maerz: And to make this very applied, because we have to be pragmatic, and we have to move forward, not just think about the kind of work package, but also who can lead that.

581

01:10:54.510 --> 01:11:14.259

Seraphine Maerz: we don't need to spell out the creator team, or, you know, who else wants to be in that work package, but who... I think we need to identify, leads, and I saw that in Lichia's, application, they also had co-leads, so this is possible if we can't make up our mind, or, you know, if, like, two strong persons

582

01:11:14.260 --> 01:11:22.109

Seraphine Maerz: Our, listed, that's fine, but institutional-wise, only one institution gets the money.

583

01:11:22.250 --> 01:11:29.899

Seraphine Maerz: Like, a work package cannot be divided between two institutions, and that's important, to know then, later on.

584

01:11:30.000 --> 01:11:31.999

Seraphine Maerz: But maybe that's the way...

585

01:11:32.110 --> 01:11:38.479

Seraphine Maerz: we should, move forward, because I think we are still missing strong leads for WorkPad.

586

01:11:38.480 --> 01:11:39.160

MaxGroemping: exits.

587

01:11:40.180 --> 01:11:41.349

Seraphine Maerz: Does that make sense?

588

01:11:42.490 --> 01:11:42.890

Seraphine Maerz: So, so.

589

01:11:42.890 --> 01:11:43.440

MaxGroemping: I agree.

590

01:11:43.440 --> 01:11:43.950

Seraphine Maerz: that?

591

01:11:44.590 --> 01:11:45.240

MaxGroemping: Yep.

592

01:11:46.030 --> 01:11:54.970

MaxGroemping: Can we... can we find a solution for sharing the literature? If you already have a Mendeley, can you just invite us to it?

593

01:11:54.970 --> 01:12:19.729

Seraphine Maerz: Oh, yeah, my Mendeley, that was a story by itself. It's a mess right now, because, I basically lost my old password, and then I had to restart, but then I found my password again, and then I had to, like, it's... you don't want to know. It's very messy, and, but I do, like, I never started a project folder, but, I have literature which I can quickly put into a folder, so...

594

01:12:19.960 --> 01:12:22.909

Seraphine Maerz: I wanted to do that for quite some time.

595

01:12:22.910 --> 01:12:33.690

MaxGroemping: I started one in Zotero, and it has 40 things in it so far. I can just share them as PDFs, maybe, and you dump them into that project folder? Yeah.

596

01:12:33.690 --> 01:12:50.680

Seraphine Maerz: Yeah, yeah, and maybe we, like, for quick, you know, like, I have this literature file in our folder. If we just see an interesting article or, you know, something where we don't have time to download and put in the folder, just put the link there.

597

01:12:50.680 --> 01:12:57.310

Seraphine Maerz: Just so we don't lose sight of it, because we might need to add here quite a bit going forward.

598

01:12:57.310 --> 01:12:57.920

MaxGroemping: Yep.

599

01:12:58.430 --> 01:13:05.630

Seraphine Maerz: Okay, and, I mean, I still... Struggle with this...

600

01:13:07.860 --> 01:13:11.069

Seraphine Maerz: Word document, but I guess it's the only way.

601

01:13:13.300 --> 01:13:20.200

Seraphine Maerz: I just can't, like, I don't feel like...

602

01:13:20.570 --> 01:13:23.489

Seraphine Maerz: Starting to work in it, it's...

603

01:13:24.530 --> 01:13:35.409

Seraphine Maerz: And I need to take it down now anyway, with all the figures and everything, it's, okay, but I will take it down, and then I will upload it again, and then,

604

01:13:35.830 --> 01:13:43.279

Seraphine Maerz: it's just the only way where we can all add, so I see I have to adjust. I have to be more resilient, I guess.

605

01:13:44.650 --> 01:13:46.199

MaxGroemping: Innovate. Adapt.

606

01:13:46.200 --> 01:14:02.690

Seraphine Maerz: Exactly. Alright, okay, but that's the plan, and then I will share, but I think we should move forward quickly by, like, not with having the entire framework worked out. This can still, take time, but I think we need to identify people.

607

01:14:03.250 --> 01:14:09.840

Seraphine Maerz: so, I think that that's really, like, yeah, I would say urgent.

608

01:14:10.670 --> 01:14:21.319

Seraphine Maerz: we need practitioners, like, if I now, again, look into the gaps this document identifies, and I think that's valid, even now with this new angle.

609

01:14:21.690 --> 01:14:29.869

Seraphine Maerz: And as we said at the start, we need practitioners, so we need to... Max, can you further explore,

610

01:14:30.040 --> 01:14:31.310

Seraphine Maerz: this potential...

611

01:14:31.310 --> 01:14:31.770

MaxGroemping: Yeah.

612

01:14:31.770 --> 01:14:33.860

Seraphine Maerz: Optin via a daily... a daily.

613

01:14:33.860 --> 01:14:34.419

MaxGroemping: I'd love to.

614

01:14:34.420 --> 01:14:46.049

Seraphine Maerz: she kind of reaches out to this, it's also so strange that they name such a network which is difficult to reach, and I don't know, but I think we just have to go with that.

615

01:14:46.580 --> 01:14:57.580

MaxGroemping: we do... we have to do it, and it may just be that it is really more of a network than anything else, but I try... I'm going to try to identify a person to contact there.

616

01:14:57.720 --> 01:15:11.799

Seraphine Maerz: Yeah. And then a public body. We need a public body. So, what's... what's about the Australian Electoral Commission? Constanza... don't we have contacts to them, or some kind of institution we contacted before?

617

01:15:11.800 --> 01:15:15.149

Dr. Constanza Sanhueza: I don't... I don't Nick and Ian do.

618

01:15:15.320 --> 01:15:17.969

Dr. Constanza Sanhueza: Yeah, some of my colleagues are...

619

01:15:17.970 --> 01:15:28.960

Seraphine Maerz: And, and, Not the Australian Intellectual, Commission, but who was... Putting up this nice,

620

01:15:29.210 --> 01:15:33.400

Seraphine Maerz: Disinformation check before the last elections here.

621

01:15:33.650 --> 01:15:35.839

Seraphine Maerz: Was it the Australian Intellectual Commission?

622

01:15:35.840 --> 01:15:37.079

Dr. Constanza Sanhueza: Yeah, like, yes.

623

01:15:37.330 --> 01:15:41.159

Dr. Constanza Sanhueza: Yeah, so we contacted them. Okay, yeah, I do have a contact.

624

01:15:41.430 --> 01:15:42.549

Dr. Constanza Sanhueza: We're contacting them.

625

01:15:42.550 --> 01:15:45.160

Seraphine Maerz: I mean, what was it called? It was,

626

01:15:45.160 --> 01:15:53.280

MaxGroemping: They had a disinformation register, that's the AEC, but they didn't do fact-checking, that there were independent third-party ones.

627

01:15:53.420 --> 01:16:06.849

Seraphine Maerz: Yeah. But the person, or the team in charge of that, I think these people would be really interesting for us to include, because they obviously also thought about this information war.

628

01:16:07.150 --> 01:16:11.299

Dr. Constanza Sanhueza: Yeah, yeah, so we contacted the former and the,

629

01:16:11.410 --> 01:16:16.649

Dr. Constanza Sanhueza: current, leader of that campaign, that's true. With Svetlana, yeah.

630

01:16:17.240 --> 01:16:19.120

Seraphine Maerz: So, is this something you can follow?

631

01:16:19.120 --> 01:16:21.350

Dr. Constanza Sanhueza: Yeah, yeah, I can reach out.

632

01:16:21.810 --> 01:16:23.310

Seraphine Maerz: And,

633

01:16:23.460 --> 01:16:24.670

Dr. Constanza Sanhueza: Automation Cafe.

634

01:16:25.210 --> 01:16:31.870

MaxGroemping: It's, also encouraged to have a civil society sort of organization.

635

01:16:31.870 --> 01:16:32.450

Seraphine Maerz: Yeah.

636

01:16:33.760 --> 01:16:36.280

Seraphine Maerz: Civil society beneficiary.

637

01:16:36.650 --> 01:16:37.320

MaxGroemping: Yep.

638

01:16:37.820 --> 01:16:39.289

Seraphine Maerz: Who could that be?

639

01:16:39.290 --> 01:16:43.590

Dr. Constanza Sanhueza: Max, remember Pipa used to work with all these...

640

01:16:43.590 --> 01:16:45.079

MaxGroemping: I do remember Pippa, yeah.

641

01:16:45.080 --> 01:17:02.399

Dr. Constanza Sanhueza: So she used to work with all these organizations, like, We Know Politics, Women in Politics. Remember, I had to do some promotion things for them, or some workshops, so they... they have agencies in different parts of the world, they promote democracy, they... they,

642

01:17:02.450 --> 01:17:08.109

Dr. Constanza Sanhueza: Instruct citizens, they form, you know, potential candidates.

643

01:17:08.240 --> 01:17:12.009

Dr. Constanza Sanhueza: Do you remember some of those? Must be even in your old reports.

644

01:17:12.670 --> 01:17:17.999

Dr. Constanza Sanhueza: Because those were, like, it was, like, international idea, they had all these chapters in different places.

645

01:17:19.190 --> 01:17:20.579

Dr. Constanza Sanhueza: Yeah, anyways, I'll...

646

01:17:20.580 --> 01:17:22.580

MaxGroemping: Paul, from the top of my head, no.

647

01:17:22.580 --> 01:17:23.170

Dr. Constanza Sanhueza: Yeah.

648

01:17:23.170 --> 01:17:23.700

MaxGroemping: Hmm.

649

01:17:23.890 --> 01:17:29.319

Seraphine Maerz: And, I think, like, I was also thinking about, Deutsche Welle?

650

01:17:29.520 --> 01:17:40.949

Seraphine Maerz: And, several of Deutsche Welle were included in this, document you shared, Constanza, in our folder, about this event organized by Patrick.

651

01:17:41.380 --> 01:17:43.100

Seraphine Maerz: And...

652

01:17:43.100 --> 01:17:46.010

Dr. Constanza Sanhueza: That'd be good. They had good contacts, yes, yes.

653

01:17:46.010 --> 01:17:55.540

Seraphine Maerz: Yeah, so I think that would be also interesting to have such a media player, like, you know, some... I mean, in a way, we're also a civil society institution, no?

654

01:17:55.640 --> 01:17:58.120

Seraphine Maerz: Or are they funded by Germany?

655

01:17:58.640 --> 01:17:59.360

Seraphine Maerz: I think...

656

01:17:59.360 --> 01:18:02.150

Dr. Constanza Sanhueza: funded by Germany, and they have this global outreach.

657

01:18:02.150 --> 01:18:05.189

Seraphine Maerz: Okay, but so, we're not typically,

658

01:18:05.380 --> 01:18:13.869

Seraphine Maerz: Yeah, but I mean, that's a body who has to engage a lot with... disinformation... kind of,

659

01:18:14.200 --> 01:18:16.009

Dr. Constanza Sanhueza: You want me to ask ABC?

660

01:18:16.440 --> 01:18:21.519

Dr. Constanza Sanhueza: Here, but it's Australian, I mean, I think Deutsche Valley has a better coverage, or Euronews, or one of those.

661

01:18:21.520 --> 01:18:31.890

Seraphine Maerz: Yeah, let's now focus more on, on, Europe as well, because I think if we have the Australian Electoral Commission and, other,

662

01:18:33.180 --> 01:18:34.230

Seraphine Maerz: Yeah.

663

01:18:36.010 --> 01:18:36.390

Dr. Constanza Sanhueza: Yeah.

664

01:18:36.390 --> 01:18:45.720

Seraphine Maerz: it's important to... maybe also in South... Southeast Asia, some kind of think tank or civil society organization.

665

01:18:45.720 --> 01:18:50.969

MaxGroemping: I do think the public policy and civil society beneficiaries

666

01:18:51.140 --> 01:18:58.520

MaxGroemping: should be either in Europe or in Australia as eligible countries. I don't think we should... play up

667

01:18:58.970 --> 01:19:01.580

MaxGroemping: the Asia thing?

668

01:19:01.710 --> 01:19:04.619

MaxGroemping: Beyond, sort of beyond,

669

01:19:05.750 --> 01:19:07.919

Seraphine Maerz: Yeah, it's also difficult with the money, right?

670

01:19:07.920 --> 01:19:17.060

MaxGroemping: It is... it is Australia's region, and therefore... and it is a comparative case, etc, but not that we... that we... they will benefit. Like.

671

01:19:17.260 --> 01:19:23.329

MaxGroemping: From the call, European democracy is the beneficiary, very, very clearly.

672

01:19:23.330 --> 01:19:32.019

Seraphine Maerz: Okay, that's a good point. And also with, like, as you said before, with including people from there, it's very,

673

01:19:32.170 --> 01:19:37.940

Seraphine Maerz: You wanna be admitted to the rating? No. Concerned?

674

01:19:37.940 --> 01:19:40.840

Dr. Constanza Sanhueza: If you can, so I moved to the car, I have to drive to school.

675

01:19:40.840 --> 01:19:41.959

Seraphine Maerz: Okay, sorry, I clicked.

676

01:19:41.960 --> 01:19:43.689

Dr. Constanza Sanhueza: No, it's all good, all good, I can hear.

677

01:19:43.690 --> 01:19:48.339

Seraphine Maerz: We can also finish now. I think we said everything, what we need to say for now.

678

01:19:49.380 --> 01:19:50.390

MaxGroemping: I think so.

679

01:19:50.950 --> 01:19:53.910

Seraphine Maerz: Okay, I'm just following up on that link.

680

01:19:57.830 --> 01:20:03.219

Seraphine Maerz: Yeah, so some, some civil society tactical tank, yes, it looks good.

681

01:20:03.220 --> 01:20:13.590

MaxGroemping: This was suggested to me by Tanya Notley, and she has worked with them, but she won't lead a work package, and so we can't, like, bank on those connections.

682

01:20:13.590 --> 01:20:14.120

Seraphine Maerz: Yep.

683

01:20:14.910 --> 01:20:23.140

Seraphine Maerz: But we should have also a civil society organization leading a work package. Litia had that also in her call, I think.

684

01:20:23.140 --> 01:20:23.730

MaxGroemping: Okay.

685

01:20:24.470 --> 01:20:26.000

Seraphine Maerz: And,

686

01:20:26.330 --> 01:20:32.139

Seraphine Maerz: I think this would be good to have someone like that, because then it's not so research, heavy.

687

01:20:32.140 --> 01:20:33.849

MaxGroemping: And then they get the money.

688

01:20:34.570 --> 01:20:49.119

Seraphine Maerz: Yeah, I have to look it up again, but that, I think, was also the sensitive part about her application, because it's networks in countries where they cannot openly disclose that they are funded by the EU.

689

01:20:50.290 --> 01:20:51.020

MaxGroemping: Okay.

690

01:20:51.600 --> 01:20:52.900

Seraphine Maerz: I think it was...

691

01:20:52.970 --> 01:20:55.860

Dr. Constanza Sanhueza: Before I go, because I really need to pick up the kids.

692

01:20:55.860 --> 01:20:56.530
Seraphine Maerz: Okay.

693
01:20:56.530 --> 01:21:01.299
Dr. Constanza Sanhueza: Yeah, just, just put something, to think about,

694
01:21:01.750 --> 01:21:16.139
Dr. Constanza Sanhueza: now that we're kind of thinking about the world packages, I'm asking money to ANU, and I have the same issue then, Max, in terms of what is going to be the role of ANU. I was asked yesterday, and I said that we are defining work packages, so...

695
01:21:16.140 --> 01:21:18.860
MaxGroemping: One work package has to be there, you know.

696
01:21:18.860 --> 01:21:25.229
Seraphine Maerz: Absolutely, absolutely. You will, you will both get a work package, at least. I mean, and... I mean...

697
01:21:26.360 --> 01:21:35.920
Dr. Constanza Sanhueza: Yeah, okay, just, I wanted to put it there, be transparent, because I was asked, and I replied very broadly, saying that we are defining things, because what I'm...

698
01:21:35.920 --> 01:21:47.299
Dr. Constanza Sanhueza: My sense is, because ANUs are leaving behind, they're, like, bureaucratic, they're taking our project, because they asked me for a whole description now, as an example for a bunch of things, and they're hiring this person.

699
01:21:47.300 --> 01:21:49.350
Dr. Constanza Sanhueza: So they're... this is what they're pushing with.

700
01:21:49.770 --> 01:21:51.170
Dr. Constanza Sanhueza: Yeah.

701
01:21:51.660 --> 01:21:57.609
Dr. Constanza Sanhueza: So, it's great, because we can ask for money and support and, you know, provide more things, potentially.

702
01:21:57.610 --> 01:22:13.890
Seraphine Maerz: Yeah. No, and I mean, we can also say so, you are

co-leads, and you also lead a work package, and so it's, I think similar to what Max also said in the application, right?

703

01:22:14.530 --> 01:22:15.110

Dr. Constanza Sanhueza: Yep.

704

01:22:15.570 --> 01:22:18.829

Dr. Constanza Sanhueza: Okay, thank you. Sorry, I didn't want to bring money issues at the very end.

705

01:22:19.070 --> 01:22:24.240

MaxGroemping: My internal application? Yeah, because if you need any of that language, you just...

706

01:22:24.520 --> 01:22:44.559

Dr. Constanza Sanhueza: Okay, could you, could you, yes, so I have to send the email today with the new budget, but yeah, I had all these people contacting me yesterday, and the day before, and the research office has said that they might be able to organize something for us, and now the college is also involved, so, yeah.

707

01:22:45.370 --> 01:22:46.769

MaxGroemping: Tend it right now, yeah.

708

01:22:47.460 --> 01:22:55.459

Dr. Constanza Sanhueza: And I have to... I am the one to respond. Nick can say what I tell him to say, but, you know, in the end, it's us working now, not him, you know, so...

709

01:22:58.030 --> 01:23:02.760

Dr. Constanza Sanhueza: Okay, go to run to school. Okay. Thank you for the very proactive meeting.

710

01:23:02.760 --> 01:23:03.680

Seraphine Maerz: Yeah, and...

711

01:23:03.680 --> 01:23:04.480

MaxGroemping: Yeah.

712

01:23:04.480 --> 01:23:07.999

Seraphine Maerz: One last sentence, next week again, same time.

713

01:23:08.690 --> 01:23:11.800

Dr. Constanza Sanhueza: That should work, just let me check briefly.

714

01:23:12.880 --> 01:23:15.380

Dr. Constanza Sanhueza: I am...

715

01:23:16.440 --> 01:23:18.469

MaxGroemping: All good from my side, yeah.

716

01:23:18.660 --> 01:23:33.080

Dr. Constanza Sanhueza: And... okay, yes, all good. And today... today I'm having this VREM meeting, so I'll see Steven. If there is anything that needs to be discussed vis-a-vis Videm's engagement with the project, let me know.

717

01:23:33.080 --> 01:23:34.340

Seraphine Maerz: Yeah, okay.

718

01:23:34.340 --> 01:23:35.020

Dr. Constanza Sanhueza: Okay.

719

01:23:35.020 --> 01:23:36.689

Seraphine Maerz: Alright, thank you, guys!

720

01:23:36.880 --> 01:23:38.079

Dr. Constanza Sanhueza: Thank you, bye!

721

01:23:38.080 --> 01:23:38.500

Seraphine Maerz: Okay.
